

105.11 - Trace Constituent Elements in Blank Filters

SRM is for use in evaluating the performance of air sampling filter methods commonly used in air sampling of industrial atmospheres. Certified values (in mg), or limits of detection (XD), for each of 30 constituent elements as well as six leachable anions and cations are provided.

PLEASE NOTE: The tables are presented to facilitate comparisons among a family of materials to help customers select the best SRM for their needs. For specific values and uncertainties, the certificate is the only official source.

SRM	2681
Description	Trace Constituent Elements in Blank Filters
Unit of Issue	(set (10))
Diameter (in mm)	42.5
Elemental Composition	30 elements
Filter Weight (in g)	0.14
Leachable Cations and Anions	6 cations

- Certified values are normal font
- Reference values are italicized
- Values in parentheses are for information only
